

ABSTRACT

There is provided an electronic device having portability and usability comparable to cellular phones and including a display that can provide a large screen comparable to liquid crystal television sets and PDAs.

An electronic device (A) has excellent portability because it can be folded to a compact size at coupling means (3). In addition, a first display portion (1a) of a first display unit (1) and a second display portion (2a) of a second display unit (2) can form a single, large-screen display portion when the first display unit (1) is rotated 90° clockwise and the second display unit (2) is rotated 90° anticlockwise.
